Bid #2021-01

Pavement Structure Improvements

**Addendum #2**

Q: Where does the Town anticipate the need for wetland delineation?

A: The selected consultant will be responsible for identifying any areas of direct wetland impact and activity within the 50-foot upland review area. The Town does not anticipate direct wetland impacts, and has identified at least three stream crossings that would require wetland delineation in the vicinity of the roadway. These are near:

- 400 Christian Lane
- 131 Deming Road
- 198 Deming Road

However, there may be other areas within 50 feet of proposed activity that the Town has not identified.
